ENVIRONMENTAL ASSESSMENT

Revision of the Subarea Master Plan

for the Regional Community Support Center

US Army Garrison

Fort Belvoir, Virginia

June 2002

Abstract

The purpose of the Regional Community Support Center (RCSC) Subarea Plan update is to correct the inconsistencies between the existing 1993 RCSC Area Development Plan and the projects now being planned for the area. There is a need to update the RCSC Area (now referred to as a Subarea) Development Plan and to have the update reflected in the overall Long-range Component Plan (LRC) for Fort Belvoir. This need is driven by requirements to more efficiently serve the ever-growing and changing military active duty and retired populations dependent upon Fort Belvoir's community support services facilities. Land use designations within the RCSC Subarea require modification and approval prior to siting and construction of any projects not covered under the existing LRC and, specifically, within the RCSC area development. This environmental assessment addresses the potential environmental impacts of master plan changes and their general ramifications in terms of the future siting and construction of new facilities. A No-Action Alternative was also considered. No significant adverse environmental impacts are anticipated as a result of the proposed action.
